We have a USB 2.0 video capture device, and we've never had trouble. The only time we have troubles is when we run the device through a USB hub. Then we have to manually set the /DMUSETUP switch (I know there's a way to do this through command line tools, but that's way beyond my skill set) in order to use the device. If anyone can help with driver troubleshooting for USB video capture devices that would be greatly appreciated! Best Regards, . If you have any problem with the above driver or device, please let us know: Email us: Or you can also email us at the following address: Other USB 2.0 Video Capture Controller Drivers - The following USB video capture devices are detected by your computer and could use this driver or other driver: 0x0d28.
