The hepatotoxic and nephrotoxic effects of triphenyltin chloride (TPTCl) in primary cultured rat hepatocytes and isolated rat hepatocytes. Triphenyltin chloride (TPTCl) is a prevalent organotin compound found widely in the world. TPTCl has hepatotoxicity and nephrotoxicity in mammals. However, the direct toxic effects of TPTCl on primary cultured rat hepatocytes and isolated rat hepatocytes have not been previously studied. Here, the effects of TPTCl on primary cultured rat hepatocytes and isolated rat hepatocytes were examined in vitro and in vivo. In the in vitro study, the viability of primary cultured rat hepatocytes, exposed to TPTCl for 24 h, was significantly decreased in a concentration-dependent manner with an LD50 of 33.7 mM. The adverse effects induced by TPTCl resulted in the increased production of al d4474df7b8
