NetScanTools Pro provides an advanced DNS toolset that works with all Windows-based systems in the network. The entire toolset is based on the Microsoft.NET framework and includes a passive DNS, DNS management, traceroute and ping tools, ARP scanner, IP scanner, and a packet sender. NetScanTools Pro has a powerful command line toolset that can be used from within Windows command prompt or from the Windows Run dialog box to assist a network administrator perform troubleshooting on specific network devices. The command line tools can be used to perform advanced DNS query and queries to help with a wide variety of network related tasks including: passive DNS queries, DNS management, traceroute and ping queries, ARP scanner queries, IP scanner queries, packet sniffer queries, host pinger queries, SMB scanner queries, port scanner queries, certificate analyzer queries, and more. The command line tools can be used to perform advanced DNS query and queries to help with a wide variety of network related tasks including: passive DNS queries, DNS management, traceroute and ping queries, ARP scanner queries, IP scanner queries, packet sniffer queries, host pinger queries, SMB scanner queries, port scanner queries, certificate analyzer queries, and more. NetScanTools Pro features an advanced passive DNS toolset that works with all Windows-based systems in the network. The entire toolset is based on the Microsoft.NET framework and includes a DNS management tool, DNS scanner and traceroute and ping tools, ARP scanner, IP

### What's New In?

NetScanTools Pro is a toolset designed to allow network monitoring and troubleshooting. It provides a broad-ranging collection of tools ready to meet the requirements of professional network managers. It allows thorough testing of the network connection, making it possible for the administrator to gather the information needed to promptly respond to bottlenecks and other issues. There are a wide range of tools to perform in-depth network analysis, including DNS-related details, email validation, whois information, traceroute and ping, port and ARP scanning data, details concerning LAN network devices, and more. The application features both manual and automated tools. The automation tools are a good way to get network-related information in one go and in a single report, but NetScanTools Pro also features a generous set of features designed for network-specific tasks. There are Active Directory and diagnostic tools, Passive Directory tools, DNS tools, as well as general information tools, all carefully categorized in a single interface. The Active Directory toolset includes ARP ping and scan, DHCP server discovery, a network routing viewer, an UDP traffic generator and packet sender, a port scanner and host pinger, SMB scanners, server tests, certificate analyzers, and so on. The Passive Directory tools are meant to keep an eye on the devices that are connected to the local network, listening to incoming packets to detect connectivity issues. There are also advanced DNS tools and general network queries, all to get statistical
